Subject index

Actin–actin interactions 312
Actin–myosin: movement assay 313
F-Actin fibril 312
G-Actin and DNase I 312
Adenovirus: as vaccine vectors 85
Adhesive proteins 53, 309
β-Adrenergic catecholamines 257
Aeration
  in air-lift bioreactors 66
  of fermentation broths 224
Affinity chromatography
  and recombinant protein purification 88
  and supports 12
Affinity purification tags 88
Agarose: as affinity chromatography matrix 12
Agitators: for mycelial fermentations 224
Aggregation: of unfolded proteins 126
Agrobacterium: as transformation vectors 61, 113, 145
AIDS
  and diagnostics 35
  and the need for antiviral agents 348
  and vaccine design 40
  see also HIV
Air-lift bioreactors 66
  and microcarriers 131, 204
Algae, halotolerant 121
Alginates: as immobilized matrices 71
Alkanes/alkenes: bioconversion by *Pseudomonas* 46
Amino acid sequence
  complementarity of hormone–receptor binding sites (Letter) 280
  and neural networks 305
  similarities 261
Amino acid substitutions
  and protein stability 93
Amino acids
  inhibition of biosynthesis by herbicides 61
  in plant seed proteins 156
  methods for analysis 283
  production in transgenic sheep 6
  separation of 216
Anaerobic bacteria: in biofilms 338
Analysis of protein sequence 282
Anchorage-dependent cell culture 204
Angiotensin II (Letter) 280
Animal cell culture: and microcarriers 131, 204
Animal models
  and immunotoxins 189
  and vaccine design 40
Antibacterial drugs 348
Antibiotics, biosynthesis 105
  control of 184
Antibiotic fermentation 317
Antibiotic resistance, naturally occurring transfer of 198
Antibodies
  and immunotoxins 189
  and the detection of GEMS 332
  geometry and form 256
  screening for HIV 35
  to HIV 40
  to the Reo peptide 259
Antibody–antigen interactions 256
Antibody binding sites 256
Antibody presenting cells (APCs) 237
Antifreeze proteins: and transgenic fish 209
Antigen delivery systems 237
  BCG 240
Antigen presenting strategies 239
Antigens
  heterologous expression in *Salmonella* vaccines 117
  HIV 40
  screening for HIV 35
Antigens and anti-idiotypes: amino acid sequence similarity 261
Anti-HIV agents 350
  AZT 351
  carbovir 352
Anti-idiotypes
  and complementary proteins 140
  and external antigens 256
Antimicrobials: human and animal sources 26
Antisense: and protein sequence 140, 279
Antisense DNA: and transgenic fish 209
Antisense RNA: and ribozymes 174
Antiviral agents 348
  ribozyme 179
  virazole 350
Antiviral nucleosides, synthesis of 348
Aqueous solution, formation of α-helix and β-sheet in 251
Arabidopsis
  seed storage proteins 1
  hygromycin resistant phenotype 341
Archetypes: for protein structure 250
Artificial neural networks 304
Artificial seeds: and alginates 71
Ascobolus immersus: and gene duplication 341
Atomic force microscope (AFM) 151
ATP-binding proteins 312
Attenuated total resistance-Fourier transform infrared: and the detection of biofilms 337

Backpropagation of error: in training of neural networks 306
Bacteria
  and biofilm formation 338
  and genetically engineered traits 329
  and immunization 237
  and synthesis of antiviral nucleosides 350
  detection using ice-nucleation genes 276
Bacterial Ice Nucleation Diagnostic (BIND) 276
Bacterial
  oxidation systems 46
  ice nucleii 276
Bacteriophage λ, clones 242
Betabellins 249
Biocides: control of biofouling of water systems 337
Biocompatible
  adhesives 53
  materials 71, 131
Bioconversion: by *Pseudomonas* 46
Biocorrosion 337
Biodegradation: of toxic waste 170
Bioengineered proteins: and wound dressing 311
Biofilms 337
Biofouling 337
Bioluminescence
  as a genetic marker 330
  markers for the detection of biofilms 337
Biomass, algal 121
Bioreactors 224
  and *Dunaliella* cultivation 121
  and microcarriers 131, 204
  air-lift 66
  design of 66
  multi-phase 46
Bioremediation 170
Biosafety levels 345
Biosensors 161, 169
  and environmental monitoring 170
Bioseparations 12, 216, 338
Biotechnology
  and safety 345
  and stress resistance in plants 359
  and the Third World 314
  information resources 318
  of plants in Japan 197
  patents 323
  separation processes 338
Blood: screening for HIV 35
Borax-flocculated cells 338
Brassica: and herbicide resistance 61
Brazil nuts, methionine-rich proteins in 156
BRIDGE (Biotechnology Research for Innovation Development and Growth in Europe) 243
Brivudine (BVDU), synthesis from *E. coli* 350
Bronsted equation 268
Brookhaven Protein Databank 307

Calchone synthase gene: and flower colour 340
Calcitonin synthesis 275
Callus: soybean 145
Cancer
  and immunotoxin therapy 189
  diagnosis of inherited 98
Capillary zone electrophoresis 283, 301
Cardiac drugs, immunosensor detection of 161
β-Carotene: production by *Dunaliella* 121

Carp: transgenic 209
Carriers 216
Cell culture
and adenovirus vectors 85
immobilization in microcarriers 131, 204
plant 139
suspension 204
Cell disruption 339
Cell harvesting 338
Cell immobilization 71, 131
Cell lines
and identification of microbial strains 319
maintenance by cryopreservation 293
Cell sorting 333
Cephalosporins, biosynthesis of 105
Chaperonins 126
in protein folding and assembly 354
Chimaeric molecules
and mRNA stability 171
immunotoxins 189
Chimaeric proteins: and vaccines 117
Chlamydomonas reinhardtii: by scanning electron microscopy 294
Cholera toxin 238
Chromatography: affinity matrices 12
Chromogenic gene markers 330
Chromosome size: in yeast 241
Classification of pathogens 345
Clathrin coated vesicles 312
Clinical immunosensors 161
Clinical trials
of HIV vaccines 40
of immunotoxins 189
Cloning: of murine IL-1 and IL-4 receptors 324
Cold resistance: and transgenic fish 209
Collagen analogues 310
Collagen–glycosaminoglycan microcarriers 131
Commercial biotechnology: information 322
Commercial production of soybean 145
Compartmentation: of glycine betaine in plants 361
Complementary hydropathy (Letter) 281
Complementarity determining regions (CDRs) 256
and complementary peptides 140
Conformational stability: of enzymes 245
see also stability
Conformational templates 249
Conjugation 198
Containment levels: for microorganisms 345
Co-suppression: in petunia 340
Corn: manipulating seed protein composition 156
Corticotropin 140
Co-solvents, use of 289
Crambin 245
Crop plants 197
and herbicide resistance 61
containing 'palatability' genes 113
Crossflow filtration: and cell harvesting 339
Crown ether carriers 216
Cryopreservation 293
Crystallites: and biological semiconductors 3
Crystallization: and supercritical fluid solvents 78
C-terminal analysis 285
Cultivated ponds: and *Dunaliella* 121
Cyclodextrins: for biomolecule purification 216
Cytofission 313
Cytokinesis 313
Cytokines 59
and the immune response 324
receptors 324
Cytomegalovirus 348
Cytomegalovirus receptor 257
Cytotoxins
and endogenous antimicrobials 26

Databases, abstracting and indexing of 320
Daughter ion spectrum: in peptide analysis 302
Degradation
of mRNA 171, 174
of proteins 282
Dengue virus antigen 240
Detoxification: of herbicides 61
Dextrans: as affinity chromatography matrix 12
Diagnostics 161
for HIV 35
Dicotyledons, transformation of 6
Dihydrofolate reductase
expression *in vitro* 275
kinetic data 268
mechanism of catalysis 264
Diphtheria toxins: in immunotoxins 189
Disease resistance: and transgenic fish 209
Disulphide bonds: and protein stability 93
DNA fingerprinting pattern: restriction profile 333
DNA, recombinant 20, 241, 249
DNA, transferred (T-DNA) 341
Dole's technique 301
Downstream processing
and microcarriers 204
and protein purification 88
and supercritical fluids 78
Drought tolerance in plants 358
Drug delivery systems: and alginates 71
Drugs
design investigations 328
immunosensor detection of 161
Dunaliella 121

Ectopic transgenesis 340
Edman degradation 282
Elastin oligopeptide repeats 309
Electron microscopy of actin filaments 312
Electroporation techniques: introducing RNA (ribozymes) 174
Electrospray mass spectrometry 286, 301
ELISA
analysis of sIL-4R 327
and the detection of GEMs 332
Emulsion liquid membranes 216
Enantiomers, separation of 216
Endocytosis: as transfection technique 174
Endonucleases: and mRNA stability 171
Engineering
and enzyme active sites 263
stability of enzymes in non-aqueous environment 248
see also protein engineering and genetic engineering
Enhanced transport: and liquid membranes 216
Enkephalin: active analogues 262
Enteric vaccines, *Salmonella* 117
Environmental biotechnology 170
Environmental monitoring: and immunosensors 161
Environmental release: interspecific gene transfer 198
Enzyme electrodes 169
Enzymes
hydration and dehydration of 245
in non-aqueous solvents 244
mechanisms 263
pressure effects on 289
stability in supercritical fluids 290
Enzymic methods: for synthesis and modification of antiviral nucleosides 348
Epidermal growth factor 59
Epifluorescent microscopy: of bacteria 333
Epigenetic variation: in maize 341
Epimutation in plants 343
'Eurokaryote' 241
European community project 241
Evanescent wave sensors 161
Exonucleases: and mRNA stability 171
Expression systems: for ribozymes 174
Expression vectors
adenovirus 85
vaccinia 20

Fast atom bombardment spectrometry 286, 301
Feed, improving protein quality of 156
Fermentor 66
see also bioreactor
Fiber optic evanescent wave immunosensors 161
Fibrin: and medical adhesives 53
Fibrinogen 261
Fibronectin 309
Fixed bed reactors: and microcarriers 204
Flow cytometry 333
Fluidized bed reactors: and microcarriers 204
Fluorescence: in immunosensors 161
Fluorescein–phalloidin: stain 313
Follicle accessory cells 237
Freeze-drying of cells 293
Freeze–thaw stresses: in *E. coli* 297
Furuculosis: immunity in salmon and trout 239
Fusion proteins 88

β-Galactosidase fusions 88
Gas-hold up 66
Gelatin: microcarriers 131

Gels
and affinity chromatography 12
and cell immobilization 71
Gene cloning: from infectious disease agents 237
Gene dispersal 198
Gene disruption, in yeast 241
Gene expression
and *trans* interactions in plants 340
continuous *in vivo* 275
control signals 354
inhibition by ribozymes 174, 179
Gene fusions: and protein purification 88
Gene therapy: and ribozymes 174, 179
Gene transfer 198
in bacteria, detection of 333
Genetic engineering
and bacteria 329
conjectural hazards of 345
for drought- and salt-tolerance 358
immunotoxins 189
of flower colour 340
plant seed storage proteins 1
Genetic manipulation
of cells *in vivo* 313
of plants 61, 139, 197, 340
of soybean 145
of yeast 243
Genetic markers: and the detection of GEMs and GMOs in the environment 330
Genetic mapping: of chromosome III in yeast 242
Genetic screening: for inherited cancers 98
Genetically engineered microorganisms (GEMs): release into the environment 329
Genetically modified organisms (GMOs) 329
Genome, yeast:
sequence determination of chromosome III 241
Ghosts, bacterial 239
Globin synthesis 275
Glucocorticoids 258
Glucose: biosensors 169
Glycerol: production by *Dunaliella* 121
β-Glucuronidase transgene: in tobacco 341
Glycine betaine: accumulation in plants 358
Glycosyl-transfer reactions 348
N-Glycosylation sites: on murine EL4 natural receptor 324
G-protein coupled hormone receptors (Letter) 280
GroE operon 354
GroEL (cpn60) protein 354
and protein folding 126
GroES (cpn10) protein 354
Growth factors
B-cell 327
polypeptide 59
Growth hormones
and transgenic fish 209
and transgenic sheep 6
Growth rates: and transgenic fish 209
Gut associated lymphoid tissue 237

Hairy root tissue 197
and thaumatin production 113
Haloprotection 359
Halotolerance: and *Dunaliella* 121
Heat-shock proteins
and protein folding 126
HSC70 312
Heavy metals, bioremediation and 170
Herbicide resistance
and transgenic soybean 145
by genetic modification 197
in crop plants 61
Herpes simplex virus (HSV-1): as source for thymidine kinase 352
Heterologous gene expression 53, 88,
and adenovirus vectors 85
and mRNA stability 171
and protein folding 126
and ribozymes 174, 179
and *Salmonella* vaccines 117
and thaumatin production 113
in nature 198
in soybean 145
in transgenic fish 209
HIV 348
and diagnostics 35
and vaccine design 40
epitope determinants 239
immunotoxin therapy for 189
